

Terminal Boot Protective Covers

InPower Model SSC 150-150 with TB-30-3 Terminal Boots.

Vinyl protective terminal boot covers offer additional protection from the environment, as well as from accidental shorting.

Red vinyl terminal boot covers are offered for InPower's line of power switching products. They provide insulation for the power terminals, as well as additional protection from the environment. Various terminal sizes are available to match the respective InPower products. The terminal boots contain an inner ridge that contacts the power terminal base, thereby providing an effective seal between the boot and power terminal. The boot's cable entrance contains a tapered sleeve that provides a seal and allows it to accommodate different cable diameters. Three sizes of cable openings are available.

Key Features

- Protects from harsh environments and accidental shorting.
- Insulates electrical power terminals.
- Contains snap-in detent seal on power terminal.
- Red color code for positive voltage power terminals.
- Molded vinyl construction.
- Tapered cable entry seal.

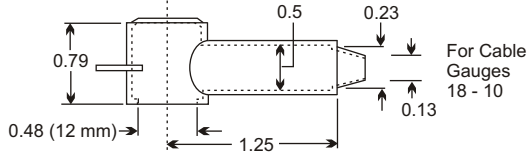

Terminal Boot Protective Cover Models

<u>Model</u>	<u>Terminal Dia.</u>		<u>Cable Entry Size</u>		<u>InPower Products</u>
